## DATA SHEET

74LVC32245A; 74LVCH32245A 32-bit bus transceiver with direction pin; 5 V tolerant; 3-state

File under Integrated Circuits, IC24

PHILIPS

## 32-bit bus transceiver with direction pin; 5 V tolerant; 3-state

## 74LVC32245A;

74LVCH32245A

## FEATURES

- 5 V tolerant inputs/outputs for interfacing with 5 V logic
- Wide supply voltage range of 1.2 to 3.6 V
- Complies with JEDEC standard no. 8-1A
- CMOS low power consumption
- MULTIBYTE ${ }^{\text {TM }}$ flow-trough standard pin-out architecture
- Low inductance multiple power and ground pins for minimum noise and ground bounce
- Direct interface with TTL levels
- Bus hold on data inputs (74LVCH32245A only)
- Typical output ground bounce voltage: $\mathrm{V}_{\mathrm{OLP}}<0.8 \mathrm{~V}$ at $\mathrm{V}_{\mathrm{CC}}=3.3 \mathrm{~V} ; \mathrm{T}_{\mathrm{amb}}=25^{\circ} \mathrm{C}$
- Typical output $\mathrm{V}_{\mathrm{OH}}$ undershoot voltage:
$\mathrm{V}_{\mathrm{OHV}}>2 \mathrm{~V}$ at $\mathrm{V}_{\mathrm{CC}}=3.3 \mathrm{~V} ; \mathrm{T}_{\mathrm{amb}}=25^{\circ} \mathrm{C}$
- Power-off disabled outputs, permitting live insertion
- Plastic fine-pitch ball grid array package.

## DESCRIPTION

The 74LVC(H)32245A is a high-performance, low-power, low-voltage, Si-gate CMOS device, superior to most advanced CMOS compatible TTL families. Inputs can be driven from either 3.3 or 5 V devices. In 3-state operation, outputs can handle 5 V . These features allow the use of these devices in a mixed 3.3 and 5 V environment.

The 74LVC(H)32245A is a 32-bit transceiver featuring non-inverting 3-state bus compatible outputs in both send and receive directions. The 74LVC(H)32245A features two
 send or receive (nDIR) inputs for direction control. n $\overline{\mathrm{OE}}$ controls the outputs so that the buses are effectively isolated.

To ensure the high-impedance state during power-up or power-down, input n $\overline{O E}$ should be tied to $\mathrm{V}_{\mathrm{CC}}$ through a pull-up resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

The 74LVCH32245A bus hold data inputs eliminates the need for external pull-up resistors to hold unused or floating data inputs at a valid logic level (see Fig.2).

## QUICK REFERENCE DATA

Ground $=0 \mathrm{~V} ; \mathrm{T}_{\mathrm{amb}}=25^{\circ} \mathrm{C} ; \mathrm{t}_{\mathrm{r}}=\mathrm{t}_{\mathrm{f}} \leq 2.5 \mathrm{~ns}$.

| SYMBOL | PARAMETER | CONDITIONS | TYPICAL | UNIT |
| :---: | :---: | :---: | :---: | :---: |
| $\mathrm{t}_{\text {PHL }} / \mathrm{t}_{\text {PLH }}$ | propagation delay $n A_{n}$ to $n B_{n} ; n B_{n}$ to $n A_{n}$ | $\mathrm{C}_{\mathrm{L}}=50 \mathrm{pF} ; \mathrm{V}_{\mathrm{CC}}=3.3 \mathrm{~V}$ | 3.0 | ns |
| $\mathrm{C}_{1}$ | input capacitance |  | 5.0 | pF |
| $\mathrm{C}_{1 / \mathrm{O}}$ | input/output capacitance |  | 10 | pF |
| $\mathrm{C}_{\text {PD }}$ | power dissipation capacitance per buffer | $\mathrm{V}_{\mathrm{I}}=\mathrm{GND}$ to $\mathrm{V}_{\mathrm{CC}}$; note 1 | 30 | pF |

## Note

1. $C_{P D}$ is used to determine the dynamic power dissipation ( $P_{D}$ in $\left.\mu \mathrm{W}\right)$.
$P_{D}=C_{P D} \times V_{C C}{ }^{2} \times f_{i}+\Sigma\left(C_{L} \times V_{C C}{ }^{2} \times f_{o}\right)$ where:
$\mathrm{f}_{\mathrm{i}}=$ input frequency in MHz ;
$\mathrm{f}_{\mathrm{o}}=$ output frequency in MHz ;
$C_{L}=$ output load capacitance in pF;
$\mathrm{V}_{\mathrm{CC}}=$ supply voltage in Volts;
$\Sigma\left(C_{L} \times V_{C C}{ }^{2} \times f_{0}\right)=$ sum of the outputs.

## 32-bit bus transceiver with direction pin;

## FUNCTION TABLE

See note 1.

| INPUT |  | OUTPUT |  |
| :---: | :---: | :---: | :---: |
| $\mathbf{n O E}$ | nDIR | $\mathbf{n A}_{\mathbf{n}}$ | $\mathbf{n B}_{\mathbf{n}}$ |
| L | L | $\mathrm{A}=\mathrm{B}$ | inputs |
| L | H | inputs | $\mathrm{B}=\mathrm{A}$ |
| H | X | Z | Z |

## Note

1. $\mathrm{H}=\mathrm{HIGH}$ voltage level;

L = LOW voltage level;
X = don't care;
$Z=$ high-impedance OFF-state.

## RECOMMENDED OPERATING CONDITIONS

| SYMBOL | PARAMETER | CONDITIONS | LIMITS |  | UNIT |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | MIN. | MAX. |  |
| $\mathrm{V}_{\mathrm{CC}}$ | DC supply voltage | for max. speed performance | 2.7 | 3.6 | V |
|  |  | for low-voltage applications | 1.2 | 3.6 | V |
| $V_{1}$ | DC input voltage |  | 0 | 5.5 | V |
| $\mathrm{V}_{\mathrm{O}}$ | DC output voltage | output HIGH or LOW state | 0 | $\mathrm{V}_{\mathrm{CC}}$ | V |
|  |  | 3-state | 0 | 5.5 | V |
| $\mathrm{T}_{\text {amb }}$ | operating ambient temperature | see DC and AC characteristics per device | -40 | +85 | ${ }^{\circ} \mathrm{C}$ |
| $\mathrm{tr}_{\mathrm{r}}, \mathrm{t}_{\mathrm{f}}(\Delta \mathrm{t} / \Delta \mathrm{f})$ | input rise and fall times ratio | $\mathrm{V}_{\mathrm{CC}}=1.2$ to 2.7 V | 0 | 20 | ns/V |
|  |  | $\mathrm{V}_{\mathrm{CC}}=2.7$ to 3.6 V | 0 | 10 |  |

## LIMITING VALUES

In accordance with the Absolute Maximum Rating System (IEC 134); voltages are referenced to GND (ground = 0 V ).

| SYMBOL | PARAMETER | CONDITIONS | MIN. | MAX. | UNIT |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathrm{V}_{\mathrm{CC}}$ | DC supply voltage |  | -0.5 | +6.5 | V |
| $\mathrm{~V}_{\mathrm{I}}$ | DC input voltage | note 1 | -0.5 | +6.5 | V |
| $\mathrm{I}_{\mathrm{IK}}$ | DC input diode current | $\mathrm{V}_{\mathrm{I}}<0$ | - | -50 | mA |
| $\mathrm{I}_{\mathrm{OK}}$ | DC output diode current | $\mathrm{V}_{\mathrm{O}}>\mathrm{V}_{\mathrm{CC}}$ or $\mathrm{V}_{\mathrm{O}}<0 ;$ note 1 | - | $\pm 50$ | mA |
| $\mathrm{~V}_{\mathrm{O}}$ | DC output voltage | output HIGH or LOW state; note 1 | -0.5 | $\mathrm{~V}_{\mathrm{CC}}+0.5$ | V |
|  |  | output 3-state; note 1 | -0.5 | +6.5 | V |
| $\mathrm{I}_{\mathrm{O}}$ | DC output source or sink current | $\mathrm{V}_{\mathrm{O}}=0$ to $\mathrm{V}_{\mathrm{CC}}$ | - | $\pm 50$ | mA |
| $\mathrm{I}_{\mathrm{CC}}, \mathrm{I}_{\mathrm{GND}}$ | DC $\mathrm{V}_{\mathrm{CC}}$ or GND current |  | - | $\pm 100$ | mA |
| $\mathrm{~T}_{\text {stg }}$ | storage temperature |  | -65 | +150 | ${ }^{\circ} \mathrm{C}$ |
| $\mathrm{P}_{\mathrm{D}}$ | power dissipation per package | temperature range: |  |  |  |
|  |  | -40 to $+85^{\circ} \mathrm{C} ;$ note 2 |  |  |  |

## Notes

1. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.
2. Above $70^{\circ} \mathrm{C}$ the value of $P_{D}$ derates linearly with $1.8 \mathrm{~mW} / \mathrm{K}$.

32-bit bus transceiver with direction pin;

## DC CHARACTERISTICS

Over recommended operating conditions; voltage are referenced to GND (ground = 0 V ).

| $\mathrm{I}_{\text {BHHO }}$ | bus hold HIGH overdrive current | notes 3, 4 and 6 | 3.6 | -500 | - | - | $\mu \mathrm{A}$ |

## Notes

1. All typical values are at $\mathrm{V}_{\mathrm{CC}}=3.3 \mathrm{~V}$ and $\mathrm{T}_{\mathrm{amb}}=25^{\circ} \mathrm{C}$.
2. For bus hold parts the bus hold circuit is switched off when $V_{I}$ exceeds $V_{C C}$ allowing 5.5 V on the input terminal.
3. Valid for data inputs of bus hold parts only (LVCH32xxx-A).
4. For data inputs only. Control inputs do not have a bus hold circuit.
5. The specified sustaining current at the data input holds the input below the specified $\mathrm{V}_{\text {}}$ level.
6. The specified overdrive current at the data input forces the data input to the opposite logic input level.

32-bit bus transceiver with direction pin;

## AC CHARACTERISTICS

Ground $=0 \mathrm{~V} ; \mathrm{t}_{\mathrm{r}}=\mathrm{t}_{\mathrm{f}} \leq 2.5 \mathrm{~ns} ; \mathrm{C}_{\mathrm{L}}=50 \mathrm{pF} ; \mathrm{R}_{\mathrm{L}}=500 \Omega$.

## SOLDERING

## Introduction to soldering surface mount packages

This text gives a very brief insight to a complex technology. A more in-depth account of soldering ICs can be found in our "Data Handbook IC26; Integrated Circuit Packages" (document order number 9398652 90011).

There is no soldering method that is ideal for all surface mount IC packages. Wave soldering is not always suitable for surface mount ICs, or for printed-circuit boards with high population densities. In these situations reflow soldering is often used.

## Reflow soldering

Reflow soldering requires solder paste (a suspension of fine solder particles, flux and binding agent) to be applied to the printed-circuit board by screen printing, stencilling or pressure-syringe dispensing before package placement.
Several methods exist for reflowing; for example, infrared/convection heating in a conveyor type oven. Throughput times (preheating, soldering and cooling) vary between 100 and 200 seconds depending on heating method.

Typical reflow peak temperatures range from
215 to $250^{\circ} \mathrm{C}$. The top-surface temperature of the packages should preferable be kept below $230^{\circ} \mathrm{C}$.

## Wave soldering

Conventional single wave soldering is not recommended for surface mount devices (SMDs) or printed-circuit boards with a high component density, as solder bridging and non-wetting can present major problems.
To overcome these problems the double-wave soldering method was specifically developed.

If wave soldering is used the following conditions must be observed for optimal results:

- Use a double-wave soldering method comprising a turbulent wave with high upward pressure followed by a smooth laminar wave.
- For packages with leads on two sides and a pitch (e):
- larger than or equal to 1.27 mm , the footprint longitudinal axis is preferred to be parallel to the transport direction of the printed-circuit board;
- smaller than 1.27 mm , the footprint longitudinal axis must be parallel to the transport direction of the printed-circuit board.
The footprint must incorporate solder thieves at the downstream end.
- For packages with leads on four sides, the footprint must be placed at a $45^{\circ}$ angle to the transport direction of the printed-circuit board. The footprint must incorporate solder thieves downstream and at the side corners.

During placement and before soldering, the package must be fixed with a droplet of adhesive. The adhesive can be applied by screen printing, pin transfer or syringe dispensing. The package can be soldered after the adhesive is cured.

Typical dwell time is 4 seconds at $250^{\circ} \mathrm{C}$.
A mildly-activated flux will eliminate the need for removal of corrosive residues in most applications.

## Manual soldering

Fix the component by first soldering two diagonally-opposite end leads. Use a low voltage ( 24 V or less) soldering iron applied to the flat part of the lead. Contact time must be limited to 10 seconds at up to $300^{\circ} \mathrm{C}$.

When using a dedicated tool, all other leads can be soldered in one operation within 2 to 5 seconds between 270 and $320^{\circ} \mathrm{C}$.

# 32-bit bus transceiver with direction pin; 

Suitability of surface mount IC packages for wave and reflow soldering methods

| PACKAGE | SOLDERING METHOD |  |
| :---: | :---: | :---: |
|  | WAVE | REFLOW ${ }^{(1)}$ |
| BGA, LFBGA, SQFP, TFBGA <br> HLQFP, HSQFP, HSOP, HTQFP, HTSSOP, SMS <br> PLCC ${ }^{(3)}$, SO, SOJ <br> LQFP, QFP, TQFP <br> SSOP, TSSOP, VSO | not suitable <br> not suitable ${ }^{(2)}$ <br> suitable <br> not recommended ${ }^{(3)(4)}$ <br> not recommended ${ }^{(5)}$ | suitable <br> suitable <br> suitable <br> suitable <br> suitable |

## Notes

1. All surface mount (SMD) packages are moisture sensitive. Depending upon the moisture content, the maximum temperature (with respect to time) and body size of the package, there is a risk that internal or external package cracks may occur due to vaporization of the moisture in them (the so called popcorn effect). For details, refer to the Drypack information in the "Data Handbook IC26; Integrated Circuit Packages; Section: Packing Methods".
2. These packages are not suitable for wave soldering as a solder joint between the printed-circuit board and heatsink (at bottom version) can not be achieved, and as solder may stick to the heatsink (on top version).
3. If wave soldering is considered, then the package must be placed at a $45^{\circ}$ angle to the solder wave direction. The package footprint must incorporate solder thieves downstream and at the side corners.
4. Wave soldering is only suitable for LQFP, TQFP and QFP packages with a pitch (e) equal to or larger than 0.8 mm ; it is definitely not suitable for packages with a pitch (e) equal to or smaller than 0.65 mm .
5. Wave soldering is only suitable for SSOP and TSSOP packages with a pitch (e) equal to or larger than 0.65 mm ; it is definitely not suitable for packages with a pitch (e) equal to or smaller than 0.5 mm .

## DEFINITIONS

| Data sheet status |  |
| :--- | :--- |
| Objective specification | This data sheet contains target or goal specifications for product development. |
| Preliminary specification | This data sheet contains preliminary data; supplementary data may be published later. |
| Product specification | This data sheet contains final product specifications. |
| Limiting values | Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or <br> more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation <br> of the device at these or at any other conditions above those given in the Characteristics sections of the specification <br> is not implied. Exposure to limiting values for extended periods may affect device reliability. |
| Application information | Where application information is given, it is advisory and does not form part of the specification. |

## LIFE SUPPORT APPLICATIONS

These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips for any damages resulting from such improper use or sale.

Lets make things better.

[^0]:    $\mathrm{V}_{\mathrm{M}}=1.5 \mathrm{~V}$ at $\mathrm{V}_{\mathrm{CC}} \geq 2.7 \mathrm{~V}$ or
    $\mathrm{V}_{\mathrm{M}}=0.5 \times \mathrm{V}_{\mathrm{CC}}$ at $\mathrm{V}_{\mathrm{CC}}<2.7 \mathrm{~V}$.
    $\mathrm{V}_{\mathrm{OL}}$ and $\mathrm{V}_{\mathrm{OH}}$ are typical output voltage drop that occur with the output load.
