### DESCRIPTION

The ETL9413 and ETL9313 Single-Chip N-Channel Microcontrollers are fully compatible with the COPS® family, fabricated using N-channel, silicon gate MOS technology. The Controller Oriented Processors are complete microcomputers containing all system timing, internal logic, ROM, RAM and I/O necessary to implement dedicated control functions in a variety of applications. Features include single supply operation, a variety of output configuration options, with an instruction set, internal architecture and I/O scheme designed to facilitate keyboard input, display output and BCD data manipulation. They are an appropriate choice for use in numerous human interface control environments. Standard test procedures and reliable high-density fabrication techniques provide the medium to large volume customers with a customized Controller Oriented Processor at a low end-product cost.

The ETL9413 is identical to the ETL9410, but with 15 I/O lines instead of 19.

The ETL9313 is exact functional equivalent but extended temperature version of ETL9413.

### PIN CONNECTIONS

**OPTION LIST**

The ETL9413/ETL9313 - mask programmable options are assigned numbers which correspond with the ETL9410 pins.

The options are programmed at the same time as the ROM pattern to provide the user with the hardware flexibility to interface to various I/O components using little or no external circuitry.

**TEST MODE** (non-standard operation)

The SO output has been configured to provide for standard test procedures for the custom-programmed ETL9413. With SO forced to logic "1", two test modes are provided, depending upon the value of SI :

- a. RAM and Internal Logic Test Mode (SI = 1)
- b. ROM Test Mode (SI = 0)

These special test modes should not be employed by the user ; they are intended for manufacturing test only.

The ETL9413 is the same chip as the ETL9410 but in a 20-pin package. The four D ports are not bonded.

Consequently, the electrical characteristics, the functional description and the instruction set are identical to the ETL9410 but without the D outputs. Please, refer to the ETL9410/9411 data sheet.

Note that the OBD instruction can be used but the D outputs are not available.
