DESCRIPTION

The M54/74HC240, HC241 and HC244 are high speed CMOS OCTAL BUS BUFFERS fabricated in silicon gate C²MOS technology.

They have the same high speed performance of LSTTL combined with true CMOS low power consumption.

The designer has a choice of select combination of inverting and non-inverting outputs, symmetrical \overline{G} (active low output control) input, and

complementary G and \overline{G} inputs. Each control input governs four BUS BUFFERS.

These devices are designed to be used with 3 state memory address drivers, etc. All inputs are equipped with protection circuits against static discharge and transient excess voltage.

(*) C_{PD} is defined as the value of the IC's internal equivalent capacitance which is calculated from the operating current consumption without load. (Refer to Test Circuit). Average operating current can be obtained by the following equation. $I_{cc(opr)} = C_{PD} \cdot V_{CC} \cdot f_{IN} + I_{cc}/8$ (per circuit)
